

IMPACT of COMPLEX TRAUMA on INFANTS AND TODDLERS

A Professional Development Opportunity

What is complex trauma? How often does complex trauma occur? Some negative experiences have more influence than others. We'll learn about Adverse Childhood Experiences (ACEs) and Brain Development, the Neurobiology of Trauma, Attachment, Language and Communication, Social and Emotional Communication, and Regulating emotions. Then we'll get into what we can do to help. Every adult who encounters a very young child can have a positive or negative influence on that child's brain. Let's be a positive influence today.

Dr Leone Legan, DCFS Central Region Consulting Psychologist
Early Intervention Credits applied for.

August 3, 2018 9:30am to Noon

McLean County Health Department,
200 W Front St, #324, Bloomington, IL
